

Hasil port node 1

The terminal window shows the execution of an Ansible playbook named 'ansible-docker-plays'. The playbook performs several tests: it checks if both nodes are accessible via IP 172.18.0.1, verifies that the default Nginx page is displayed, and maintains Ansible connectivity. It then runs a 'FINAL COMPREHENSIVE TEST' which includes a web browser test (Node1: http://172.18.0.1:9001, Node2: http://172.18.0.1:9002) and a page content test (Node1 title: 'Welcome to nginx!', Node2 title: 'Welcome to nginx!'). Finally, it checks the service status of Nginx on both nodes, showing that the master process is running on port 8080 and worker processes are running on port 8080. The terminal output concludes with 'SETUP COMPLETE!' and a list of checks: 'Both nodes accessible via IP 172.18.0.1', 'Default Nginx page displayed', and 'Ansible connectivity maintained'.

The web browser window shows the 'Welcome to nginx!' page. The page content includes a message stating: 'If you see this page, the nginx web server is successfully installed and working. Further configuration is required.' It also provides links for online documentation and support, referring to nginx.org, and mentions that commercial support is available at nginx.com. The page concludes with 'Thank you for using nginx.'

Hasil port node 2
